

KOOLBOX

The Krueger Koolbox, engineered for the demands of food distribution. The Koolbox offers rear-end loading and an expansive range of customisable options, allowing operators to tailor the trailer to your fleets specific needs. With rear-end loading and a huge range of custom options, the Koolbox lets you tailor every detail to fit your fleet perfectly. At its core is Krueger's legendary chassis, engineered for unbeatable strength, durability, and quality you can trust.

Designed to take on Australia's harshest conditions, the Koolbox keeps delicate food freight protected and on the move. Available in single, B-Double, and PBS combinations, with flexible rear door setups, custom colors, and lighting options, these rugged workhorses deliver the performance, reliability, and versatility your operation needs.

FRIDGE UNIT OPTIONS

Krueger has access to the best refrigeration units options available based on your requirement and needs. Whether your purpose is cargo based, looking to find the most cost efficient system, or focused on lowering your emissions, we have access to a full range of units from brands such as Thermo King & Carrier to suit the application.

BOX DEXTERITY

Krueger's chassis provides a rock-solid platform that protects the integrity of the freezer box during even the toughest deliveries. Krueger's reinforced rear end and strategically placed gussets add critical layers of strength where it's needed most, reducing flex, absorbing stress, and enhancing structural dexterity.

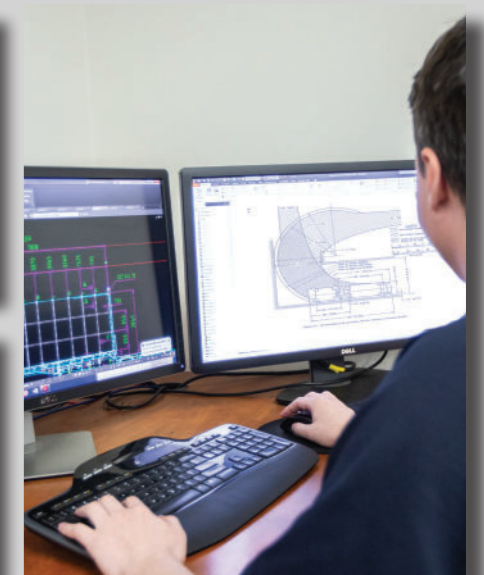

This smart engineering not only shields the freezer box from daily wear and tear but also maintains its integrity over time, even under heavy load and frequent docking impacts.

PBS APPROVAL PROCESS

Krueger's specialist Performance-Based Standards (PBS) engineering team works closely with customers to assist with existing PBS approvals and new designs that will best integrate with prime movers.

To achieve maximum payload and optimal route access, Krueger leverages the latest technologies including state-of-the-art computer software.

COLOUR RANGE

The Krueger chassis can be finished in a wide range of colour options to suit your livery, or choose from our standard colour range, presented by Dylux.
