

KURTS

The Krueger Kurts are specifically designed for the rigor of today's industrial environment. Well regarded for analyzing trailer procurement strategies, Krueger always ensures that fleet operators make the most of their road transport investments. Our Kurts can be engineered in various formats, from standard Straights able to take various pallet loads, to Drop and Double Drop Deck specifications, Mezzanine Decks, and PBS options as well as A Double with Dolly, A/B and B Double configurations with Monolite and Heavy Duty suspension options for all your working needs.

LOAD RESTRAINT

Krueger has spent three decades designing and testing roof track, curtain roller and curtains design including a range of OH&S friendly side curtain and side gate options that are now industry standard throughout Australia that have been responsible for reducing injury and work care claims Australia wide.

Krueger mandates all new design tests to ensure reliability and safety prior to offering new products to customers, and has done so for the past 3 decades. Moreover, it complies with NTC guidelines, thanks to its lightweight, high-strength carbon fiber section integrated into the curtain structure, ensuring improved freight containment.

SELF LIFTING GATES

Our award-winning Self-Lifting and Slide-A-Gate is a game-changer in the transportation industry. This innovative system eliminates the need for side gates or gate carriers, making loading and unloading a breeze. It also eliminates the requirement for load binders for uniform pallet cargo, resulting in increased payload and tare weight savings.

This translates to quicker turnaround times, improved productivity, and reduced OH&S issues. The investment in the Self-Lifting and Slide-A-Gate technology excels at containing and preventing load shift, with load restraint ratings for one and two pallets high.

AUTO RATCHET MEZZ DECKS

Auto ratchet deck is raised and lowered by one person driving the forklift; there are no saddles, it simply locks into the desired position i.e. self locking lever. Green means its locked, Red means its unlocked.

PBS APPROVAL PROCESS

Krueger's specialist Performance-Based Standards (PBS) engineering team works closely with customers to assist with existing PBS approvals and new designs that will best integrate with prime movers.

To achieve maximum payload and optimal route access, Krueger leverages the latest technologies including state-of-the-art computer software.
